Open to full-time, contract, and remote opportunities · Available immediately

PROFILE

Results-driven Full Stack Developer with 4+ years of experience building scalable, high-performance applications across fintech and customer experience domains. Expert in Java 8/11/17, Spring Boot, Hibernate, and Microservices architecture with hands-on React.js front-end skills. Proven track record of leading 4-person development teams, building real-time systems handling 10,000+ concurrent WebSocket connections, and delivering RESTful APIs integrated with major trading platforms (MT4, MT5, cTrader). Known for clean, maintainable code, CI/CD automation on AWS, and direct client-facing delivery.

SKILLS

Programming Languages: Java 8/11/17, JavaScript, SQL

Backend Technologies: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, REST APIs, Microservices

Frontend Technologies: React.js, HTML5, CSS3, Redux, Context API

Databases: MySQL, PostgreSQL

Messaging & Realtime: WebSocket

DevOps & Cloud: AWS (EC2, S3, SES), CI/CD, Git, GitHub

Tools & IDEs: Eclipse, VS Code, Maven, GitHub Copilot, Jira,

Testing & Docs: Swagger, Postman, Manual Testing, Debugging

Methodologies: Agile, Scrum, Code Review

Operating Systems: Windows, Linux

Trading Platforms: MT4, MT5, cTrader, TradeLocker, DxTrade, MatchTrader

WORK EXPERIENCE

FULL-STACK DEVELOPER

May 2023 – Present

Garioxtech Private Limited | Delhi, India

- Designed and built scalable RESTful JSON APIs using Java and Spring Boot, consumed by React.js frontends, supporting 10,000+ concurrent WebSocket connections.
- Developed responsive, production-ready UI components with React.js and JavaScript, reducing average page load time by ~30% through lazy loading and component optimization.
- Led architectural decisions and code reviews across multiple product lines, improving code quality and reducing bug reopen rate by 40%.
- Collaborated directly with clients to gather requirements and translate business needs into robust technical solutions, consistently delivering on time.
- Maintained high code quality standards through unit testing, debugging, and documentation using JUnit and Swagger.

SOFTWARE ENGINEER TRAINEE

Nov 2021 – Apr 2023

Dream Filler Software Solution Pvt. Ltd. | Satna, India

- Contributed to 2+ real-world production projects during an intensive 1.5-year traineeship, building full-featured backend systems from scratch.
- Built efficient RESTful APIs using Java, Spring Boot, Hibernate, and JPA for seamless data handling and third-party service integration.
- Gained hands-on experience with Node.js-based backend development alongside Java Spring stack, expanding cross-platform capabilities.
- Supported backend feature development, bug resolution, and performance testing, reducing API response times by ~20% through query optimization.

PROJECTS

Trade Clone | Java, Spring Boot, SQL, MT4, MT5, cTrader, TradeLocker, DxTrade, MatchTrader

- Engineered a real-time trade mirroring platform integrating 6 major trading platforms (MT4, MT5, cTrader, TradeLocker, DxTrade, MatchTrader) via their native APIs.
- Implemented WebSocket-based real-time data streaming capable of handling 10,000+ concurrent connections with sub-100ms latency.

- Built a dynamic trade allocation engine supporting master-to-sub account cloning with configurable lot sizing, risk management rules, and position filters.
- Designed a robust fault-tolerance layer with automatic reconnection, trade reconciliation, and error alerting to ensure zero missed trades.

Hashboard | Spring Boot, Java, React.js, PostgreSQL, AWS (EC2, S3, SES)

- Built end-to-end Survey module with dynamic form rendering in React.js and a Spring Boot backend to collect, store, and aggregate customer feedback — supporting configurable question types and real-time response tracking.
- Developed a Complaint Management system with full lifecycle handling (submission → assignment → resolution), reducing average complaint resolution time by ~25% through automated routing and status notifications via AWS SES.
- Engineered a Customer Journey tracking module to map touchpoints across user interactions, providing business teams with actionable insights through a role-based React.js dashboard.
- Designed normalized PostgreSQL schemas for survey, complaint, and journey data, optimizing query performance with indexing — reducing report generation time by ~30%.
- Led a team of 4 in end-to-end delivery on AWS (EC2, S3, SES) with CI/CD pipelines, ensuring zero-downtime deployments and 99.9% uptime.

Broan – Nutone Overture | Spring Boot, Java, AWS, PostgreSQL

- Delivered a customer experience platform for a North American home appliance brand, integrating product registration, warranty tracking, and support ticketing.
- Architected a microservices-based backend with Spring Boot, enabling independent scaling of product catalog, user management, and notification services.
- Integrated AWS S3 for document storage and AWS SES for automated email notifications, handling 5,000+ product registrations monthly.
- Built a responsive React.js frontend with role-based access control, improving admin workflow efficiency by 35%.

EDUCATION

B.Tech – Computer Science & Engineering

Vindhya Institute of Technology and Science | Satna, India

Jun 2015 – Jun 2019
